

Avanti Laser Facial Laser Genesis Skin Therapy

Treatment of Wrinkles and Redness, Management of Large Pores and Skin Texture

Laser Genesis skin therapy is an innovative, technologically advanced way to promote vibrant and healthy looking skin in men and women. Now you can have a youthful appearance by treating those conditions that are typically associated with premature signs of aging, such as excessive redness, large pores, uneven texture, and fine-line wrinkles. The Laser Genesis procedure has been scientifically proven to produce new collagen.

The Laser Genesis difference.

The Laser Genesis procedure utilizes non-invasive laser technology to safely, discretely and effectively treat fine-line wrinkles, diffuse and excessive redness and help manage large pores, uneven skin texture, and scars. You can expect to see subtle yet consistent results after each treatment, without unwanted side effects such as bruising or excessive skin irritation. Treatments can be performed in a relaxed, comfortable manner without the use of topical anesthetics or gel.

How does Laser Genesis work?

By gently heating the upper dermis well below your skin's surface, Laser Genesis stimulates collagen regrowth. Additional heat is generated in dilated capillaries to reduce redness.

How many treatments will I need?

The treatment results are often subtle. On average, you may require four to six treatments in order to achieve optimal results. Every patient's condition and needs vary.

What are the possible side effects?

Although most patients report few if any side effects, the most common is a slight redness that disappears within a few hours of treatment.

What kind of textural improvements can you expect with Laser Genesis skin therapy?

Over the course of four to five treatments, Laser Genesis can help restore the skin's youthful glow and appearance by smoothing out uneven texture caused by aging, sun damage or scars. You will see a more even, healthy complexion as large pores are reduced in size, and minor imperfections are diminished. The individual treatment results are subtle, but the overall effect of multiple treatments can be quite dramatic.
